Substitute Abstract for Appl. No. 09/719,847

ABSTRACT

A vessel and a method for thermally treating wort in beer brewing, wherein a wort guiding screen or cone is placed inside the vessel and a feed pipe ending above the wort guiding screen or cone is used to discharge wort from above onto the wort guiding screen or cone. The wort boiling method has the wort discharged onto an inclined, heated guiding surface from which it flows down and spreads into a sheet and is thereby heated.
